

Eco Karma — Whitepaper Lite

Version 1.0 | January 2026

Introduction

My name is Trevor Walker, based in South Africa. Eco Karma is not a hype project, a meme coin, or a promise of overnight riches. It is a practical tool—built to reward real environmental and social actions with real cryptocurrency, backed by verifiable proof.

Eco Karma is launching this year. The platform is still evolving, still being refined, but the foundation is clear and honest: One phone. One token. Real-world impact.

EKA — The Eco Karma Token

Network: Base Chain

Total Supply: 1,000,000,000 EKA

Token Tax: None

Hidden Burns: None

How You Earn EKA

Eco Karma rewards verified real-world actions including Good Deeds, Upcycling projects, offline Mesh Chat participation, Eco Mining, and Impact-backed NFTs. New earning paths are added continuously.

Premium Boost

Optional premium membership costs R5 per month and includes boosted rewards, early access, profile enhancements, and direct environmental contributions through tree planting.

Wallet & Swaps

EKA can be withdrawn or swapped into ETH, BTC, or USDC with real-time pricing and a 0.5% fee. No lockups. No artificial delays.

Roadmap

Current focus includes token deployment, app launch, mission rollout, and partnerships with NGOs and municipalities. Future governance will only be implemented if it adds real value.

Closing

Eco Karma is a working system that rewards measurable positive action. Pick up trash. Build something useful. Connect communities. Earn real value.
