

# EcoKarma — Whitepaper Lite (v2)

Global Eco■Impact Platform

## Introduction

EcoKarma is a community■driven eco■impact platform designed to reward verified positive action. It is not a speculative investment product, a promise of profit, or a shortcut to wealth. EcoKarma exists to recognise consistency, participation, and contribution through a fair, transparent system.

## Core Principles

- One human equals one account
- Rewards are tied to verifiable participation
- Fixed token supply with controlled emissions
- Transparency over hype
- Sustainability over speed

## What Is EKA?

EKA is the EcoKarma utility token. It represents participation and contribution within the EcoKarma ecosystem. EKA is used to reward verified actions, enable access to platform features, and support community■driven impact. EKA is not designed or marketed as an investment vehicle.

## Earning Model

EKA is earned gradually over time through verified participation. Earning occurs in 12■hour cycles and is capped to ensure long■term sustainability.

- Maximum earning rate: 1 EKA per day
- Lifetime earning cap per user: 1,000 EKA
- Target timeframe to reach cap: 3–5 years of consistent participation

## Emission Safeguards

To prevent abuse and premature exhaustion of supply, EcoKarma applies soft emission controls. As users approach higher lifetime totals, earning rates may gradually reduce. This avoids hard cut■offs while extending long■term participation incentives.

## Guest Mode & Accessibility

EcoKarma supports a guest■first experience. Users may explore the platform without registering. Registration is only required when earning is activated. This design choice prioritises transparency and informed participation.

## Wallets & Withdrawals

User wallets persist across sessions and display balances transparently. Withdrawals require identity verification (KYC) to protect the integrity of the ecosystem. External liquidity and exchange access are phased responsibly and not guaranteed.

## **Companies & Organisations**

Companies and organisations participate by funding impact, sponsoring missions, and purchasing EKA through market mechanisms. They do not receive free emissions or earning privileges. This ensures individuals remain the primary beneficiaries of the system.

## **Governance**

Governance mechanisms may be explored in the future if and only if they provide real value to the community. EcoKarma prioritises operational clarity over premature decentralisation.

## **Closing Statement**

EcoKarma is built for the long term. It rewards action, not attention. It values consistency over hype. Every contribution, no matter how small, adds to a measurable, transparent impact.
